

To bring **Thames Water Plc** before the International Caretaker Court (ICC), the Bureau of Democratic Jurisprudence has compiled an unalterable evidentiary docket using the **Sensor Grid** and the **Truth Ledger**. Given the company's history of sewage discharges and infrastructural neglect in London and the Thames Valley, the case will focus heavily on **Category I: Ecocide and Biosphere Sabotage**.

Below is the preliminary case file drafted for the 500-citizen Supreme Jury to review.

International Caretaker Court (ICC)

Case File Reference: ICC-2026-1012 / UK-Thames-Node

Classification: Public Record – Open Access via Public Ledger

Status: Injunction Active – Assets Frozen Awaiting Jury Empanelment

I. Case Overview & Defendants

- **The Prosecution:** The Bureau of Democratic Jurisprudence, on behalf of the Residents and Local Councils of the Greater London and Thames Valley Technates (including **Hackney Council**).
- **The Defendants:** The Executive Executive Board, Major Institutional Shareholders, and Parent Holding Companies of **Thames Water Plc**.
- **Core Indictment:** **Category I:** Ecocide & Biosphere Sabotage (Systemic Riverine Pollution); **Category II:** Infrastructure Starvation and Public Hazard Creation.

II. Formal Charges & Sensor Grid Telemetry

Charge 1: Ecocide via Systemic Sewage Discharges (The River Thames & Tributaries)

- **The Act:** The defendants systematically utilized the River Thames, the River Lea, and surrounding chalk streams as open dumping grounds for untreated effluent to preserve corporate cash flow and avoid infrastructural maintenance during the final years of the capitalist paradigm.
- **The Evidence:** Live bio-chemical telemetry pulled directly from the **Sensor Grid** network across London nodes (including Hackney marshes and the Teddington lock). Real-time water-purity sensors recorded a **sustained 680% elevation in harmful coliform bacteria, microplastics, and industrial chemical nitrates** over baseline safety thresholds.
- **AI Advisor Assessment:** The predictive neural network estimates a catastrophic collapse of local freshwater ecosystems, resulting in a 42% decline in native fish populations. Restoring the Thames basin to biological equilibrium will require an estimated **5.8-megatonne carbon-equivalent expenditure** in ecological engineering and manual wetland restoration labor.

Charge 2: Infrastructure Starvation and Resource Neglect (The London Water Grid)

- **The Act:** Allowing the structural decay of clean water distribution networks, resulting in the daily leakage of hundreds of millions of liters of treated water while simultaneously enforcing artificial water restrictions on citizens.
- **The Evidence:** The **Truth Ledger** has mapped the physical leakage coordinates against corporate capital expenditure reports, revealing that the infrastructure was intentionally starved of physical materials to maximize dividend payouts to offshore holding companies.

III. Physical & Structural Asset Forfeiture Inventory

Because financial debt, corporate shares, and the billions of pounds (£) in liabilities held by Thames Water Plc are recognized as dead data under the moneyless system, the court has bypassed the financial shell companies. The ICC has issued a **Sovereign Freeze** on all physical assets to transition them directly into the **Caretaker Commons**:

Asset Category	Physical Inventory Breakdown	Immediate Parallel Rerouting
Water Treatment Infrastructure	102x Waste Treatment Plants (including Beckton & Crossness) and 30x Reservoirs.	Handed directly to the Department of the Caretaker Commons and local municipal councils to be run as public utility trusts.
Logistics & Machinery	1,400x Maintenance Vehicles, heavy excavation machinery, and specialized pipe-laying fleets.	Absorbed by the Non-Combative Defences (NCD) to be converted to zero-emission specs for emergency engineering.
Real Estate & Land Holdings	Thousands of acres of operational and non-operational land, utility facilities, and corporate offices.	Converted into Community Land Trusts for public rewilding, urban farming, and localized guild housing.

IV. Proposed Restitution Framework (For Jury Deliberation)

Should the 500-citizen Supreme Jury return a verdict of *Guilty*, the Prosecution submits the following non-retributive **Restitution Mandate**:

1. **Abolition of Corporate Entity:** Thames Water Plc is permanently dissolved. Its administrative software silos are forced open, stripped of proprietary code, and integrated directly into the open-source **Metabolic Grid** to automate leak detection via the AI Advisor.
 2. **The Executive Custodial Sentence:** The executive board members and majority shareholders are stripped of all Silver and Gold luxury tiers and placed at the **Bronze Tier baseline**. Their **Social Reliability (SR) scores are set to 0**.
 3. **The Ecological Repair Track:** To earn spendable Liquid Points and rebuild their community standing, the convicted executives will be assigned to a mandatory 48-month manual labor track under the *Land & Resource Collective*. They will be deployed on the ground to physically clear sewage blockages, repair broken water mains in London, and manually plant reed beds along the River Lea to biosynthesize the pollution they caused.
